## LAST CREATURE IN THE WORLD DIES

Hope the seal, the last remaining creature on Earth, was found dead in her enclosure at London Zoo today. For the past 10 years the zoo has been home to the last few animals rescued when there were no longer enough natural habitats for these creatures to survive in the wild. Despite the best care, the animals

Hope the seal, the last remaining creature on Earth, was found dead in her enclosure at London Zoo today. For the past 10 years the zoo has been home to the last few animals rescued when there were no longer enough natural habitats for these creatures to survive in the wild. Despite the best care, the animals were unable to breed in captivity and Hope died peacefully of old age. A statement from the Royal Society for the Prevention of Cruelty to Animals (RSPCA) released today announced that following the extinction of all insects, animals and marine life, the animal charity is to close as there are no animals left to protect in the world.

### POLLUTION AND HUMAN-MADE RUBBISH

## Plan(et) B

### WHAT DOES THE RSPCA THINK ABOUT CARING FOR WILD ANIMALS AND THE PLANET?

How we live our lives affects wild animals in many different ways

Giving wild animals what they need in captivity can be difficult and sometimes it's best not to keep them in captivity at all

Wild animals should be safe from harm and suffering, and their habitats should be protected from pollution and destruction

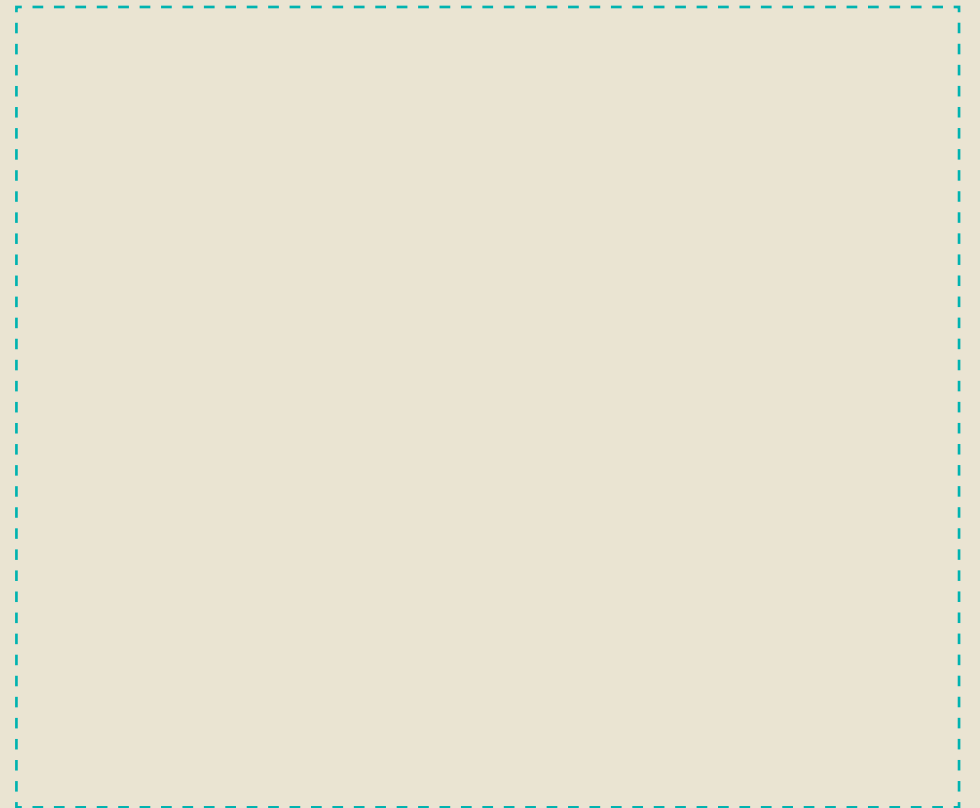

The RSPCA treats injured and sick wild animals in its wildlife centres and aims to return them to the wild

### ANIMALS IN THEIR HABITATS

What is this animal's habitat  
and what are their needs?

What would happen if this  
habitat was taken away?
